(54) Title: IMPROVEMENTS IN OR RELATING TO STAIRLIFTS

(57) Abstract: The invention provides a swivel mechanism (10) for inclusion between the carriage (14) and chair (12) of a stairlift. The mechanism preferably includes two pivot axes, each offset from the centre line of the chair so as to reduce the rearward intrusion when the chair is swivelled. The swivel action is preferably effected by the interaction of control members (40a, 40b) sliding in inter-related arcuate guides (38a, 38b).
